

Trailhead GPS Watch - User Manual

The Trailhead GPS Watch tracks distance, pace, elevation gain, and heart rate for running, hiking, and cycling activities. A full charge provides up to 14 days of battery life in smartwatch mode, or 30 hours in continuous GPS tracking mode.

To pair the watch with your phone, hold the side button for 3 seconds until the Bluetooth icon flashes, then open the Trailhead app and select Add Device. The watch supports iOS 13 and above, and Android 9 and above.

The watch is water resistant to 50 meters and is safe for swimming and showering, but should not be used for scuba diving or high-pressure water activities such as jet skiing.

If the watch does not respond, hold the side button and the down button together for 10 seconds to force a restart. This will not erase saved activities, which are synced to the cloud automatically once the watch reconnects to Wi-Fi.

The warranty covers manufacturing defects for 2 years from the date of purchase. Water damage caused by exceeding the 50 meter depth rating is not covered under warranty.
